

■ FINAL QA REPORT – CONNQ APPLICATION

1. Document Information

- **Project Name:** ConnQ Mobile Application Testing
 - **Testing Type:** Manual Functional Testing
 - **Platform:** Android
 - **Tester:** QA Intern Candidate
 - **Tools Used:** Mobile Device, Manual Test Execution, Excel Reporting
-

2. Objective

The objective of this testing activity is to evaluate the functional correctness, UI behavior, and end-to-end user flow of the ConnQ mobile application, including registration, login, onboarding, trial setup, profile management, and card management features.

3. Scope of Testing

Included Modules:

- Application Installation & Launch
 - User Registration & Validation
 - Login & Logout Functionality
 - OTP Verification Flow
 - Homepage UI & Navigation
 - Free Trial Setup Flow
 - Feature Selection Process
 - Profile Management
 - Card Management
-

4. Testing Approach

The application was tested using:

- Positive testing (valid inputs)

- Negative testing (invalid inputs)
- UI validation testing
- End-to-end workflow testing

5. Summary of Test Execution

- **Total Test Cases Executed:** 25+
- **Passed:** Majority
- **Failed:** 5 Critical Issues Identified
- **Blocked:** None

6. Summary of Defects

Bug ID	Title	Severity	Priority	Status
BUG-001	Invalid email allows OTP navigation	High	High	Open
BUG-002	OTP screen back button not functional	Medium	High	Open
BUG-003	Continue button unresponsive in Free Trial (no selection)	High	High	Open
BUG-004	Trial completes without feature selection	High	High	Open
BUG-005	Card deletion fails due to DELETE method not allowed	High	High	Open

7. Key Issues Identified

1. Registration Flow Issue

Invalid email input incorrectly proceeds to OTP screen instead of showing validation error.

2. Navigation Issue

Back button on OTP screen is not functional, causing navigation inconsistency.

3. Free Trial Validation Issue

User can proceed or get stuck without selecting required options.

4. Business Logic Issue

Trial completion is allowed without feature selection, bypassing required onboarding steps.

🐛 5. Backend/API Issue

Card deletion fails due to unsupported DELETE method.

8. Observations

- Application has good UI structure and flow design.
 - Major issues exist in validation and backend integration.
 - Critical onboarding flow is not properly enforced.
 - Some navigation inconsistencies affect user experience.
-

9. Conclusion

The ConnQ application is functionally usable but contains **critical functional and backend defects** that impact user onboarding and core operations. These issues should be addressed before production release to ensure a stable user experience
